DETAILED ACTION

Allowable Subject Matter

1. Claims 1 and 7-12 are allowed and renumbered.
2. The following is a statement of reasons for the indication of allowable subject matter: No prior art was found to meet the limitations of the independent claims. The following are the identified innovative limitations:

Claim 1:

...wherein a period in which the mobile station in the active state is neither transmitting nor receiving is measured in the link layer and in the network layer so that the state of said mobile station is changed to a state different from the active state when the period exceeds a predetermined period,

Claim 7:

...wherein the state of said mobile station in the network layer is changed to a state different from the active state when the period exceeds a predetermined period,

Claim 8:

...wherein, in the location-information management apparatus, whether the state of said mobile station in said network layer is active or idle is managed, and information regarding a cell to which the mobile station in said active state belongs and information regarding a location- registration area to which the mobile station in said idle state belongs are managed,

wherein the state of said mobile station is changed to a state different from the active state when the period timed with said timer means exceeds a predetermined period,

and wherein, when a signal destined for the mobile station in a state different from the active state is received in the link layer, a state- transition signal created by said mobile station in response to a paging signal for paging said mobile station is received, and in response to the state- transition signal indicating that a state transition should be performed, the signal accumulated that is destined for said mobile station is transmitted, or the paging signal and the signal destined for said mobile station are discontinuously transmitted.

Claim 10:

...wherein whether a state of said mobile station in a network layer upper to the link layer is active or idle is managed by a location- information management apparatus, and in the location-information management apparatus, information pertaining to a cell to which said mobile station in said active state belongs and information pertaining to a location-registration area to which said mobile station in said idle state belongs are managed,

wherein the state of said mobile station transitions to a state different from the active state when the period timed with said timer means exceeds a predetermined period,

and wherein, when in a state different from the active state in at least one of said network layer and said link layer, after said state- transition signal is transmitted,

the signal accumulated in said location-information management apparatus or said wireless-base station is received, or the paging signal and a signal destined for the mobile station itself are discontinuously received...

Claim 12:

...transmitting to said location-information management apparatus, when the period timed in the network layer has exceeded a predetermined period, a state-transition signal indicating that the state in the network layer of said mobile station should transition to an idle state; and

3. Claims 2-6 are not elected and thus cancelled.
4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
